DESCRIPTION

This agent procedure will rename the agent's hostname via a Powershell script.

It will prompt for the new hostname, username/password of a local admin, and whether you want to reboot or not. Once scheduled, it will create a Powershell script on the endpoint and rename it. The changes will not take effect until the endpoint is restarted.

INSTALL INSTRUCTIONS

1. Extract the XML from the attached zip file

2. Import the XML into the agent procedure module: https://helpdesk.kaseya.com/hc/en-gb/articles/229012068-How-Do-I-Import-An-Agent-Procedure-

3. Execute the procedure on a target machine

4. Fill in the prompted variables
