

DESCRIPTION

This Agent procedure checks the Windows Updates installed on the endpoints.

It will prompt for a KB and scan the endpoint for all the installed KB's to see if the requested one is installed.

The procedure will then write in the log if the KB was found or not found, as well as upload a file to the GetFiles folder in "Windows Update" to get the output of the script.

Keep in mind some KB may not show as installed because they are part of a more recent Rollup that includes it. You can check these rollups in the Microsoft Update Catalog

INSTALL INSTRUCTIONS

1. Extract the files from the attached zip file
2. Upload the Power Shell file to the Shared Files directory of the Managed Files folder:
<https://helpdesk.kaseya.com/hc/en-gb/articles/360017878358>
3. Import the XML into the agent procedure module: <https://helpdesk.kaseya.com/hc/en-gb/articles/229012068>
4. Execute the procedure on a target machine
5. Fill in the prompted variables
