

## DESCRIPTION

This Agent procedures allows to install Root CA certificate into local repository of target Windows machine.

*Please notice, that archive contains example of root certificate under **Certificates** folder. You need to upload your own certificate.*

## INSTALL INSTRUCTIONS

1. Extract the files from the attached zip file
2. Upload desired root certificate (\*.cer) to the **Shared Files/Certificates** directory of the Managed Files folder:  
<https://helpdesk.kaseya.com/hc/en-gb/articles/360017878358>
3. Import the XML into the agent procedure module: <https://helpdesk.kaseya.com/hc/en-gb/articles/229012068>
4. Edit name of the file with root certificate in Agent Procedure:

```
4    getVariable ("Secure Agent Working Directory Path", " ", "ksystem", "All Operating Systems", "Halt on Fail" )
5    getVariable ("Constant Value", "entrust_g3_ca.cer", "filename", "All Operating Systems", "Halt on Fail" )
```

5. Execute the desired procedure on a target machine
