

DESCRIPTION

This agent procedure helps to rename a local computer's name to Machine Group – System Serial Number

It will prompt for the username/password of a local admin, and whether you want to reboot or not. Once scheduled, it will create a Powershell script on the endpoint and rename it. The changes will not take effect until the endpoint is restarted.

INSTALL INSTRUCTIONS

1. Extract the XML from the attached zip file
2. Import the XML into the agent procedure module: [https://helpdesk.kaseya.com/hc/en-gb/articles/229012068- How-Do-I-Import-An-Agent-Procedure](https://helpdesk.kaseya.com/hc/en-gb/articles/229012068-How-Do-I-Import-An-Agent-Procedure)
3. Execute the procedure on a target machine
4. Fill in the prompted variables
