DESCRIPTION

This Agent procedures allows to install or uninstall Kaseya Agent Watchdog script. Archive contains Agent Procedure file and folder with PowerShell scripts:

Install-Watchdog.ps1 – This script registers new task called "Kaseya Agent Watchdog" on target computer and executes Watch-AgentService.ps1 script with SYSTEM privileges in interval specified inside Agent procedure (30 minutes by default). Script reports success or failure of installation to Procedure log.

Watch-AgentService.ps1 – Script which directly checks status of the service and restart it. It recognizes two types of status "Stopped" and "Running". If Kaseya Agent service is stopped and there are no active RDP connections at the moment, script starts it. If service is running – script does nothing. All event are logged to Application log.

Uninstall-Watchdog.ps1 – Script removes "Kaseya Agent Watchdog" task from the target computer and deletes Watchdog folder (under Kaseya Secure Working Directory) with all it's content.

Script will send result of execution into Procedure Log and indicate success or failure.

INSTALL INSTRUCTIONS

1. Extract the files from the attached zip file

2. Upload PowerShell scripts to the Shared Files/**Watchdog** directory of the Managed Files folder:
