## DESCRIPTION

These Agent Procedures are created to install the latest Malwarebytes version on the Windows computer and to uninstall Malwarebytes.

The Agent Procedure that installs Malwarebytes detects if Malwarebytes is already installed on the computer. If Malwarebytes is detected, the Procedure first uninstalls it and then downloads and installs the latest version of Malwarebytes.

INSTALL INSTRUCTIONS

1. Extract the file from the attached zip file.

3. Import the XML into the agent procedure module: https://helpdesk.kaseya.com/hc/en-gb/articles/229012068.

4. Execute the required procedure on a target machine.
